The Notino W5700 series is an entry-level performance notebook from Hi-Grade with a full size 15.4" display. Delivering the best value in mobile technology, the W5700 offers incredible price performance with a choice of colours and either Celeron or Core Duo processors. With battery life of up to 3 hours, a DVD/CD-ReWriter/DVD-Re-Writer combo drive and a long list of connectivity options, you'll have all the power you need on the go.

The Notino W5700P is no pale pink wallflower. Rather, its lustrous surfaces are tinted in a confident shade of fuchsia. This is a notebook that says it loud – it's pink and it's proud!

The Notino D7000SR range features Intel's latest state-of-the-art dual-core processor chips, code named "Santa Rosa." This new versatile Core 2 Duo CPU boasts a number of performance tweaks over previous dual-core processors. For example, doubling the rate at which streaming media can be processed ('advanced digital media boost') speeds up data intensive applications such as video editing and digital music creation.

To further speed up the Windows boot-up process and certain frequently used applications, Intel's Turbo Memory feature is available as a low-cost option. A full gigabyte of internal flash memory is used to cache selected Windows and application data that would normally be stored on the hard drive, dramatically reducing the time the CPU takes to access it when needed. The more the Turbo Memory system learns over time about the owner's usual patterns of operating system and application use, the faster the frequently used processes become.

Perhaps even more significant than the D7000SR's raw performance is its embrace of advanced power saving features. The front-side bus speed — which in the D7000SR is specified at a blistering 800 MHz — slows down automatically depending on operating requirements, while an enhanced sleep function powers down one or both CPU cores when they are not in use. As a result, even a high-performance notebook like the D7000SR will run for up to three hours between charges.

The Notino D7000SR offers high 2D performance while the D7000SRA thanks to its ATI HD8400XT discreet graphics chip it also offers adequate 3D graphics to run most of the latest 3D games.

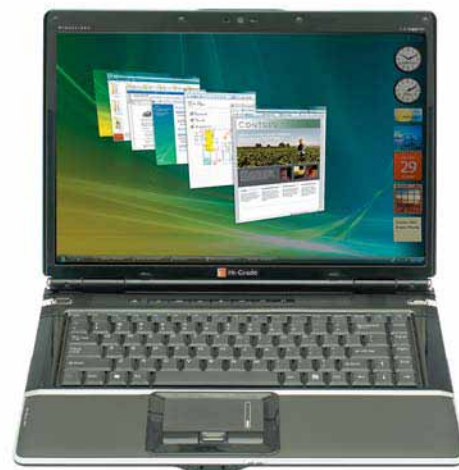

NOTINO D7000SRA

The Hi-Grade Endura R5500 is the ideal companion for working on the move. The Endura R5500 is not only built to survive the rigours of the road but is tough enough to survive drop testing to military specifications — an achievement normally associated with expensive, bulky, special-purpose rugged PCs rather than slim, lightweight, ergonomic and economically priced mainstream notebooks like the R5500. Powered by Intel's latest Intel® Core™2 Duo technology, this is a powerhouse of a portable.

The smart card reader is an added security feature to the standard Windows password ensuring that your data is safe. Another unique feature is the RS232 serial port still required in some industries for controlling external equipment.

The UltiNote A9800SR belongs to a new category of mobile computer that is not so much a 'desktop replacement' as a complete portable desktop. The 17-inch, 1440 x 900 pixel wide-format LCD screen is more than a match for standard desktop displays, while desirable specifications such as a large hard disc (up to 250 Gbyte), dual-format DVD rewriter, four-in-one memory card reader, and four USB ports for external peripherals are all present and correct.

Complementing the advanced video set-up, Hi-Grade has tweaked the audio configuration beyond that normally expected of a notebook. An onboard amplifier delivers 2 watt per channel to the built-in stereo speakers, while support for 7.1 surround sound through optional external speakers is available via an S/PDIF digital audio output, making the A9800SR the perfect multimedia mobile

For those who want to also entertain themselves with computer games the A9900SR with the dedicated ATI Mobility Radeon X2400HD 256Mb graphics chip would be the ideal choice.

When it comes to raw performance, the dual-core 'Santa Rosa' processor can be specified up to version T7800 (2.6GHz), or to the even faster 2.8 GHz X7900 Extreme processor.

ULTINOTE A9900SR

The Notino D2200P, nicknamed the 'Pinkpad', is a light, compact and neatly styled laptop presented in beautiful yet subtle rose-petal pink. Its space saving 12-inch widescreen display offers exquisite WXGA resolution, often featured on larger notebook screens and capable of picking out the most delicate detail in bright, natural looking colour. A two-tone pink keyboard panel, discretely set off by elegant silver-grey edge trim, is slanted ergonomically toward the user for comfortable typing.

Despite its petite form, the Pinkpad, powered by Intel's dual core technology, squeezes uncompromising performance and functionality that one might expect from an up-to-the-minute notebook.

At just under 2 kg in weight, the Pinkpad can be carried around comfortably and is small enough (at 303 x 225 x 26-28 mm) to slip easily into a bag. For extra protection, the notebook comes with a black carry case as standard, but this can be optionally substituted by a matching pink designer case.
